

Nordmann MultiPipe

The steam distribution manifold for shortest humidification distances. Stainless steel. Quick and easy installation.

Key benefits

Custom-built to fit your steam humidifier

MultiPipe is customised to fit the Nordmann range of electrode steam humidifiers. This reduces installation times and increases the performance of your systems.

Humidification distance – shorter than ever

Compared to conventional steam distribution, the MultiPipe steam manifold's precision nozzles achieve humidification distances up to four times shorter. Thus, the humidification system can be used even if room is a rare commodity.

Steam distribution without condensation

Unsurprisingly, MultiPipe distributes steam evenly across the complete duct cross-section – free of droplets.

Made to last

Good news for your budget: MultiPipe's primary components – steam distribution pipes and precision nozzles – are made entirely of stainless steel. They are virtually indestructible and allow for long and maintenance-free operation hours of your system.

Ready to go in no time

MultiPipe is manufactured to your individual specifications and thus completely matches your system's duct dimensions. Delivery as a turnkey unit reduces installation time to a minimum.

Technical data

MultiPipe System	Steam connectors	Steam output	Duct dimensions (mm)	
			Width	Height
1	1	32	450...2700	450...1650
2	2	65	450...2700	450...2200
4	4	130	450...2700	800...3200

Systems 1 and 2 for single units only
system 4 for double units only
